CLAIMS

- 1 1. (Previously presented) A system for rapid manipulation and cutting
- 2 comprising:
- 3 a housing,
- 4 a bearing block attached to an end of the housing,
- 5 a first cutting element, the first cutting element being an eccentric disc rotatably
- 6 connected to the bearing block by an axle, wherein the first cutting element is
- 7 configured to rotate eccentrically, and
- 8 a drive mechanism adapted to be mounted at least partly within the housing and
- 9 operatively connected to the first cutting element for providing torque about the
- 10 axle of the first cutting element,
- wherein the first cutting element, the axle and the bearing block are configured
- such that a cutting edge of the disc is exposed beyond the end of the bearing
- 13 block distal to the housing for only part of the eccentric rotation.
 - 2-3. (Canceled)
- 1 4. (Currently amended) The system of claim 1 wherein the housing is
- 2 roughly cylindrical, the roughly cylindrical housing having an altitude and a
- 3 radius, the altitude being much larger than the radius.
- 5. (Original) The system of claim 1 wherein the housing is shaped as a
- 2 handpiece.
 - (Canceled)

600765338v1 2

- 7. (Original) The system of claim 1 wherein the housing is shaped for use as
- 2 a tissue manipulator for blunt force dissection.
- 8. (Previously presented) The system of claim 1, wherein the first cutting
- 2 element is adapted for cutting tissue.
- 9. (Original) The system of claim 8 wherein the housing is adapted for use
- 2 as a tissue probe.
 - (Canceled)
- 1 11. (Previously presented) The system of claim 1, wherein the first cutting
- element is adapted for cutting man-made materials.
 - 12-13. (Canceled)
- 1 14. (Original) The system of claim 1 wherein the system includes means for
- 2 electrocautery.
- 15. (Original) The system of claim 1 wherein the drive mechanism includes a
- 2 pinion gear assembly.
- 16. (Original) The system of claim 1 wherein the drive mechanism includes a
- 2 pulley drive assembly.
- 17. (Original) The system of claim 1 wherein the drive mechanism includes a
- 2 bevel gear drive assembly.
- 18. (Original) The system of claim 1 wherein the drive mechanism includes a

600765338vI 3

- 2 direct motor drive assembly.
- 1 19. (Original) The system of claim 1 wherein the drive mechanism includes a
- 2 crank arm drive assembly.
- (Previously presented) The system of claim 1 further comprising a
- 2 second cutting element.
- 21. (Original) The system of claim 1 wherein the drive mechanism includes
- 2 hydraulic means.
- 22. (Original) The system of claim 1 wherein the drive mechanism includes
- 2 pneumatic means.
- 1 23. (Previously presented) The system of claim 1 wherein the system is
- configured to provide a variable depth of cut determined by the eccentricity of the
- 3 first cutting element.
- 1 24. (Previously presented) The system of claim 1 wherein the system is
- 2 configured to provide a variable ramp angle of the incision determined by the
- 3 eccentricity of the first cutting element.
- 25. (Previously presented) The system of claim 1 wherein the system is
- 2 configured to provide a variable rate of cut determined by the eccentricity of the
- 3 first cutting element.
 - 26. (Canceled)
- 1 27. (Previously presented) The system of claim 1 wherein the disc is

- 2 eccentrically mounted on the axle.
- 1 28. (Previously presented) The system of claim 1 wherein the disc is circular.
- 1 29. (Previously presented) The system of claim 1 wherein the disc is elliptical.
- 1 30. (New) The system of claim 20, wherein said second cutting element is an
- eccentric disc rotatably connected to the bearing block by the axle, said second
- 3 cutting element being configured to rotate eccentrically, and wherein said first
- 4 cutting element and said second cutting element are parallel.
- 1 31. (New) The system of claim 30, wherein the first cutting element and the
- 2 second cutting element are configured to move synchronously.
